

What We Treat

Occupational Rehab (FCE)

Occupational Health and Motor Vehicle Injuries

Physical therapists at Rehab Specialists will implement an active and expedited approach to managing a patient's work or auto related injury. Specific interventions may include posture reeducation, body mechanics, lifting reeducation, simulated work education, manual therapy, exercises, stretches, modalities and a home program to maintain gains. We also work to provide the patient with the tools necessary to prevent any potential flare-ups in the future and to continue with the physical conditioning upon completion of the program. Work simulation equipment to simulate particular work environment is provided.

- Whiplash injuries
- Acute strains/sprains
- Work conditioning
- Back to work Rehab
- Simulated work training for easy return to work
- **Pre-employment screening.**

FCE (Functional Capacity Evaluations)

Rehab Specialists routinely perform functional capacity evaluations (FCE) and has extensive experience in evaluating work injuries and assessing the injured workers ability to return to work. Rehab Specialists FCE is an objective, evidence based published procedure that determines individual work capacity. FCE is usually done in a 2-4 hour appointment. A full comprehensive detailed report is generated which could be used to evaluate a persons ability to return to his new or previous job.
